

GRADE 1 MORTISE LOCKSET

8800 SERIES

PARTS & SERVICE MANUAL

HOW TO ORDER PARTS

To order parts, use the appropriate part number and specify finish if necessary.

For example, to order 10 curved lip strikes for any function:

Quantity	Part Number	Description
10	50-8800-2023-FIN	Strike, Curved Lip

To order 10 cylinder latch levers for an Entrance Function (8807):

Quantity	Part Number	Description
10	50-8899-0010	Cylinder Latch Lever

For further assistance, contact your authorized Yale distributor or contact Yale directly at (800) 438-1951.

FINISH CHART

ANSI Code	Finish Description	Roses	Levers	Armor Fronts/Strikes
605	Bright Brass, Clear Coated	003	003	003

629	Bright Stainless Steel	032	032	032
630	Satin Stainless Steel	033	033	033

FINISH CARE

8800 Series Mortise Locks are designed to provide the highest standard of product quality and performance. Care should be taken to ensure a long-lasting finish. When cleaning is required, use a soft damp cloth. Using lacquer thinners, caustic soaps, abrasive cleaners or polishes could damage the coating and result in tarnishing.

PVD LIFETIME FINISH

Physical Vapor Deposition (PVD) is a technologically advanced finish coating that provides the ultimate surface protection against environmental elements and everyday wear and tear. PVD matches clear coated finishes in appearance, yet surpasses them in durability. Yale® warrants all its PVD finishes against corrosion, tarnish, wear, discoloring and peeling for the lifetime of the part to which it has been applied. Ask your sales representative for specific warranty information.

MAINTENANCE

Yale® 8800 Series Mortise Locks are manufactured to be maintenance-free under normal operating conditions and environments. Subjection to extremely heavy traffic and/or particularly dusty and dirty environmental conditions, however, may eventually cause unsatisfactory operation due to slow-moving parts or sticking cylinders. In this case, it may be necessary to clean and re-lubricate the lockset to maintain optimum performance. To clean the lockset mechanism, use a penetrating or solvent type lubricant to loosen sticking components, then lubricate with lithium grease. To free sticking or jammed cylinders, lubricate with graphite or a non-oily lubricant (such as Lock-EZE). Do not use petroleum-based lubricants in the cylinder keyway.

(F12)

INSTALLATION INSTRUCTIONS

Yale® Mortise Locks 8800 Series (Knob, FL and SL Trim)

NOTES

The following is a step by step approach to installing a mortise lock and trim to both wood and steel doors.

- 1) Determine Hand of Door
- 2) Mark Position and Door Template
- 3) Drill Holes in Door
- 4) Mark Frame for Strike and Mortise Cavities
- 5) Drill Mortise Cavities in Door and Frame
- 6) Install Lock (Wood or H.M. Door)
- 7) Install Strike
- 8) Sectional Trim
- 9) Escutcheon Plate Trim (Thru-bolted)
- 10) Escutcheon Plate Trim (Surface Mounted)
- 11) Single Operational Trim (Sectional and Escutcheon)
- 12) Check Operation of Lock

1) DETERMINE HAND OF DOOR

- a. Face the door from the outside to determine its hand. Please note the outside is either the key side of an entrance door or the corridor side of a room door. The outside of a single communicating door is the side opposing the hinges. The outside of twin communicating doors is the space between the doors.

2) MARK POSITION AND DOOR TEMPLATE

- a. Draw a horizontal centerline for the lock on both sides of door at desired height above finished floor line. Standard height for horizontal centerline is 39-15/16" above finished floor.
- b. Select template by comparing handing of door to Fig. 4, 5 and 6.
- c. Compare the lock function number being installed with (See Fig. 3) to determine the holes to be marked.
- d. Position the installation template on the door so that the horizontal centerline lines up with the horizontal line on the door. Mark the holes to be drilled using a scribe, center punch, or nail on the inside and outside of door. To avoid shifting of the template, it may be taped to the door during this step.
- e. On the edge of the door mark the holes to be drilled for the mortise cavity and armor front attaching screw holes.

3) DRILL HOLES IN DOOR

- a. Bore marked lock trim holes (steps 2d and 2e). To avoid splintering wood, bore thru holes from both sides of door. For hole sizes refer to hole chart. Note: Hole "A" diameter is different for FL & SL Applications.

4) MARK FRAME FOR STRIKE MORTISE CAVITIES

- a. Mark vertical position of strike on jamb using the reference centerline on installation template (see Fig. 4, 5 or 6). Mark location of strike lip. (FIRST DETERMINE IF SILENCERS ARE TO BE USED) To locate horizontal centerline of strike, take half the door thickness PLUS the thickness of silencer (if used). Use this dimension to locate the strike centerline from the doorstop. (See Fig. 1.)

5) DRILL MORTISE CAVITIES IN DOOR AND FRAME

- a. Mortise door edge for lock body. Drill pilot holes for attaching screws.
- b. Slide lock body into cavity with armor front attached. Align armor front with top mark. Use lock front as template. Mark outline.
- c. Mortise door edge for lock front (7/32") deep.
- d. Mortise jamb for strike (3/32" deep). Be sure to mortise 1" (25mm) deep to accommodate lock bolts or strike box if used. (See Fig. 1)

Note: Before installing lock, prepare door trim per sections 8, 9, 10 or 11.

6) INSTALL LOCK (WOOD OR H.M. DOOR)

- a. Remove armor front.
- b. If necessary, change handing of lock by following instructions on lock. Do this to match your door hand.
- c. Insert lock body into cavity in door and secure base front with two #12 combination attaching screws. Make sure lock is positioned in cutout properly. (See Fig. 3.) Note: Installation may require leaving #12 combination screws loose until trim and cylinder are assembled in lock body.

INSTALLATION INSTRUCTIONS

7) INSTALL STRIKE

- a. Attach strike to jamb using two #12 combination attaching screws. (See Fig. 1.)

Installation Trouble Shooting Tips

Problem	Possible Cause	Solution
Difficult to operate lock by lever or by key.	Loose (Trim H.M. Doors) (Vibration caused by normal operation of door opening and closing can loosen attaching screws)	Adjust and tighten - as necessary. If screws continually loosen up, use a screw locking compound (such as Loctite) on all attaching screws.
	Door is warped or sagging, binding up latch bolt in strike cutout.	Check to see where latch is hanging up in strike. If door is sagging, tightening top hinge screws may solve problem. Hole in strike plate may have to be filed to relieve bind. Doors can warp when weather changes: warm inside - cold outside cool inside - hot outside (Exterior doors painted in a dark color are particularly susceptible to warpage when exposed to direct sunlight.) It may take a few seasonal changes to work out all binding problems.
Loose Trim (wood doors)	Wood doors after being installed will sometimes shrink slightly as the building dries out.	Tighten all screws as needed
Latch bolt hangs up in lock body	Foreign object in lock body (metal shavings, saw dust, wood particles, mineral ore etc.)	Remove lock from door and remove foreign object from body. *Lubricate if necessary.
	Lock body lacks lubrication or lubrication has gummed up with age.	Use penetrating or solvent type lubricant as a cleaning agent to loosen frozen or sticking components. Lubricate with silicon base or Lithium Grease.
Cylinder jams up	Dirt or other foreign object may be in keyway affecting operation.	Lubricate cylinder with graphite or other non-oily lubricant (such as Lock-EZE) Do not use oil based lubricants in Keyway.

* Please note: Disassembling lock body will void warranty.
